

## Online Event

# THE GEOECONOMICS OF MONEY IN THE DIGITAL AGE

**10 december 2024**  
**17.00 - 18.00 CET**

Working language: English, no translation

Global monetary dynamics are evolving rapidly, with trade and finance increasingly intertwined with economic security and geopolitical considerations. In this turbulent economic landscape, will the international monetary system experience a process of fragmentation or the emergence of a new global order?

In this event, Nicola Bilotta, author of *The Geoeconomics of Money in the Digital Age*, will explore whether the current interplay of digitalization of finance, a resurgence of geopolitical considerations and growing economic dislocation could pave the way for a new global financial order. The event aims to give the author, selected speakers and the public a fruitful occasion to discuss critical questions about the future of global finance based on the first book in the [Trends and Perspectives in International Politics series](#), edited by IAI for Routledge.
